Assignment 1

Yuki Joyama (yj2803)

Problem 1

(a) $X_2 \perp\!\!\!\perp X_3, X_7, X_8, X_{10}$
$X_3 \perp\!\!\!\perp X_2 | X_1$
$X_4 \perp\!\!\!\perp X_1, X_7, X_8, X_{10} | X_2, X_3$
$X_5 \perp\!\!\!\perp X_1, X_2, X_3, X_7, X_8, X_9, X_{10} | X_4$
$X_6 \perp\!\!\!\perp X_1, X_2, X_3, X_4, X_7, X_8, X_9, X_{10} | X_5$
$X_7 \perp\!\!\!\perp X_1, X_2, X_4, X_5, X_6 | X_3$
$X_8 \perp\!\!\!\perp X_1, X_2, X_4, X_5, X_6 | X_3, X_7$
$X_9 \perp\!\!\!\perp X_1, X_2, X_3, X_5, X_6, X_7 | X_4, X_8, X_{10}$
$X_{10} \perp\!\!\!\perp X_1, X_2, X_3, X_4, X_5, X_6, X_7 | X_8$

(b) $X_2 \perp_d X_9 | X_4$: False
$X_7 \perp_d X_5 | \{X_3, X_8\}$: True
$\{X_2, X_4\} \perp_d X_7 | \{X_6, X_9, X_{10}\}$: False

Problem 2

Problem 3

Agreements: $D \perp\!\!\!\perp \{A, C\} | B$
Disagreements: $A \perp\!\!\!\perp C | \phi$ (a), $C \perp\!\!\!\perp \{A, D\} | B$ (b)

Problem 4

(a) Unshielded colliders in Figure 3: $C \to E \leftarrow A$, $C \to B \leftarrow A$, $D \to E \leftarrow B$
No DAGs in the option matches these three structures.

(b) An unshielded collider in a DAG will violate the Markov equivalence with respect to the chain DAG. Taken this into account, we can consider two cases that will be Markov equivalent to the chain DAG:
1.Flip all the arrows to left
2.For $X_i (i = 2, 3, ..., p-1)$, flip all the arrows to left before X_i
There are p-2 possible X_is that can be the pivot of the arrows. Therefore, $p-2+1 = p-1$ DAGs are Markov equivalent to the chain DAG.

Problem 5

(a)

```
## $paths
##  [1] "C -> B -> A <- E -> F -> G -> H" "C -> B -> A <- E -> F -> H"
##  [3] "C -> B <- G -> H"               "C -> B <- G <- F -> H"
##  [5] "C -> E -> A <- B <- G -> H"     "C -> E -> A <- B <- G <- F -> H"
##  [7] "C -> E -> F -> G -> H"          "C -> E -> F -> H"
##  [9] "C -> F -> G -> H"               "C -> F -> H"
## [11] "C -> F <- E -> A <- B <- G -> H" "C -> H"
##
## $open
##  [1] FALSE FALSE FALSE FALSE FALSE FALSE  TRUE  TRUE  TRUE  TRUE FALSE  TRUE
```

(b)

```
## E and G are not d-separated given A and B.
```

(c)

```
## A _||_ C | B, E
## A _||_ D | C, E
## A _||_ D | B, E
## A _||_ F | C, E, G
## A _||_ F | B, E
## A _||_ G | B, C, F
## A _||_ G | B, E
## A _||_ H | C, F, G
## A _||_ H | C, E, G
## A _||_ H | B, C, F
## A _||_ H | B, E
## B _||_ D | C, E
## B _||_ D | C, F
## B _||_ D | C, G
## B _||_ E | C, F
## B _||_ E | C, G
## B _||_ F | C, G
## B _||_ H | C, G
## C _||_ D
## C _||_ G | F
## D _||_ F | C, E
## D _||_ G | F
## D _||_ G | C, E
## D _||_ H | C, F
## D _||_ H | C, E
## E _||_ G | F
## E _||_ H | C, F
```

With the option "type = all.pairs":

```
## A _||_ C | B, E
## A _||_ C | B, D, E
## A _||_ C | B, E, F
## A _||_ C | B, D, E, F
## A _||_ C | B, E, G
```

```
## A _||_ C | B, D, E, G
## A _||_ C | B, E, F, G
## A _||_ C | B, D, E, F, G
## A _||_ C | B, E, H
## A _||_ C | B, D, E, H
## A _||_ C | B, E, F, H
## A _||_ C | B, D, E, F, H
## A _||_ C | B, E, G, H
## A _||_ C | B, D, E, G, H
## A _||_ C | B, E, F, G, H
## A _||_ C | B, D, E, F, G, H
## A _||_ D | B, E
## A _||_ D | C, E
## A _||_ D | B, C, E

## E _||_ H | A, B, C, D, F, G
```

According to the documentation, the default for this function is type = "missing.edge". This returns a list of conditional independencies with minimal testable implication per missing edge while type = "all.pairs" returns all implied conditional independencies between two variables. This is why the first one is shorter than the second one.

(d) The summary of the simulated data (N=10000) is shown below.

```
##        A                    B                   C                    D

##
## Residual standard error: 0.7491 on 9992 degrees of freedom
## Multiple R-squared:  0.4435, Adjusted R-squared:  0.4431
## F-statistic:  1138 on 7 and 9992 DF,  p-value: < 2.2e-16
```

The coefficients for variables outside of the Markov blanket (D, F, H) have p-values greater than 0.05, indicating their independence from B. Meanwhile, the coefficients for variables within the Markov blanket have p-values less than 0.05, confirming that the Markov blanket property holds for vertex B.

Code

```r
# problem 5
library(dagitty)

# construct fig 5 DAG
g <- dagitty('dag {
    D [pos="0,0"]
    E [pos="1,0"]
    C [pos="1,-1"]
    A [pos="2,0"]
    B [pos="3,0"]
    F [pos="4,0"]
    G [pos="4,-1"]
    H [pos="5,-1"]

    D -> E -> A <- B <- G -> H
    C -> E -> F -> G
    C -> H
    C -> B
    C -> F -> H
}')

# a: path from C to H
paths(g, "C", "H")

# b: d-separation between E and G given A and B
if(dseparated(g, "E", "G", c("A", "B"))){
  message("E"," and ", "G"," are d-separated given A and B.")
} else {
  message("E"," and ", "G", " are not d-separated given A and B.")
