# Assignment 1

Yuki Joyama (yj2803)

## Problem 1

- (a)  $X_2 \perp \!\!\! \perp X_3, X_7, X_8, X_9, X_{10} | X_1$   $X_3 \perp \!\!\! \perp X_2 | X_1$   $X_4 \perp \!\!\! \perp X_1, X_7, X_8, X_{10} | X_2, X_3$   $X_5 \perp \!\!\! \perp X_1, X_2, X_3, X_7, X_8, X_9, X_{10} | X_4$   $X_6 \perp \!\!\! \perp X_1, X_2, X_3, X_4, X_7, X_8, X_9, X_{10} | X_5$   $X_7 \perp \!\!\! \perp X_1, X_2, X_4, X_5, X_6 | X_3$   $X_8 \perp \!\!\! \perp X_1, X_2, X_4, X_5, X_6 | X_3, X_7$   $X_9 \perp \!\!\! \perp X_1, X_2, X_3, X_5, X_6, X_7 | X_4, X_8, X_{10}$  $X_{10} \perp \!\!\! \perp X_1, X_2, X_3, X_4, X_5, X_6, X_7 | X_8$
- (b)  $X_2 \perp_d X_9 | X_4$ : False  $X_7 \perp_d X_5 | \{X_3, X_8\}$ : True  $\{X_2, X_4\} \perp_d X_7 | \{X_6, X_9, X_{10}\}$ : False

#### Problem 2

We want to know if  $X_i$  is d-connected to  $X \setminus \{Mb(X_i, \mathcal{G}), X_i\}$  given  $Mb(X_i, \mathcal{G})$ . By definition of Markov blanket wrt  $\mathcal{G}$ ,  $Mb(X_i, \mathcal{G}) \equiv Pa(X_i) \cup Ch(X_i) \cup Pa(Ch(X_i))$ . Any path from  $X_i$  to  $X \setminus \{Mb(X_i, \mathcal{G}), X_i\}$  go through  $Pa(X_i)$ ,  $Ch(X_i)$  (where there is no  $Pa(Ch(X_i))$ ), or  $Ch(X_i)$  and  $Pa(Ch(X_i))$ . In the first case,  $Pa(X_i)$  cannot be a collider and it is in the conditioning set so the path is not active. In the second case,  $Ch(X_i)$  cannot be a collider and it is in the conditioning set so the path is not active. However,  $Pa(Ch(X_i))$  cannot be a collider and it is in the conditioning set so the path is active. However,  $Pa(Ch(X_i))$  cannot be a collider and it is in the conditioning set so this path is not active. Therefore,  $X_i$  cannot be d-connected to  $X \setminus \{Mb(X_i, \mathcal{G}), X_i\}$  and  $X_i \perp_d X \setminus \{Mb(X_i, \mathcal{G}), X_i\} \mid Mb(X_i, \mathcal{G})$  holds. By global Markov property,  $X_i \perp_d X \setminus \{Mb(X_i, \mathcal{G}), X_i\} \mid Mb(X_i, \mathcal{G})$ .

## Problem 3

Agreements:  $D \perp \!\!\!\perp \{A,C\}|B$ 

Disagreements:  $A \perp \!\!\!\perp C | \phi$  (a),  $C \perp \!\!\!\perp \{A, D\} | B$  (b)

#### Problem 4

(a) Unshielded colliders in Figure 3:  $C \to E \leftarrow A, C \to B \leftarrow A, D \to E \leftarrow B$ No DAGs in the option matches these three structures. (b) An unshielded collider in a DAG will violate the Markov equivalence with respect to the chain DAG. Taken this into account, we can consider two cases that will be Markov equivalent to the chain DAG: 1.Flip all the arrows to left

2. For  $X_i$  (i = 2, 3, ..., p - 1), flip all the arrows to left before  $X_i$ 

There are p-2 possible  $X_i$ s that can be the pivot of the arrows. Therefore, p-2+1=p-1 DAGs are Markov equivalent to the chain DAG.

### Problem 5

(a)

```
## $paths
  [1] "C -> B -> A <- E -> F -> G -> H" "C -> B -> A <- E -> F -> H"
   [3] "C -> B <- G -> H"
                                         "C -> B <- G <- F -> H"
                                         "C -> E -> A <- B <- G <- F -> H"
   [5] "C -> E -> A <- B <- G -> H"
##
   [7] "C -> E -> F -> G -> H"
                                         "C -> E -> F -> H"
   [9] "C -> F -> G -> H"
                                         "C -> F -> H"
## [11] "C -> F <- E -> A <- B <- G -> H" "C -> H"
##
## $open
## [1] FALSE FALSE FALSE FALSE FALSE TRUE TRUE TRUE TRUE FALSE TRUE
 (b)
## E and G are not d-separated given A and B.
```

(c)

```
## A _||_ C | B, E
## A _||_ D | C, E
## A _||_ D | B, E
## A _||_ F | C, E, G
## A _||_ F | B, E
## A _||_ G | B, C, F
## A _||_ G | B, E
## A _||_ H | C, F, G
## A _||_ H | C, E, G
## A _||_ H | B, C, F
## A _||_ H | B, E
## B _||_ D | C, E
## B _||_ D | C, F
## B _||_ D | C, G
## B _||_ E | C, F
## B _||_ E | C, G
## B _||_ F | C, G
## B _||_ H | C, G
## C _||_ D
## C _||_ G | F
## D _||_ F | C, E
## D _||_ G | F
## D _||_ G | C, E
```

```
## D _||_ H | C, F
## D _||_ H | C, E
## E _||_ G | F
## E _||_ H | C, F
```

With the option "type = all.pairs":

```
## A _||_ C | B, E
## A _||_ C | B, D, E
## A _||_ C | B, E, F
## A _||_ C | B, D, E, F
## A _||_ C | B, E, G
## A _||_ C | B, D, E, G
## A _||_ C | B, E, F, G
## A _||_ C | B, D, E, F, G
## A _||_ C | B, E, H
## A _||_ C | B, D, E, H
## A _||_ C | B, E, F, H

## E _ | | _ H | B, C, D, F, G
## E _||_ H | A, B, C, D, F, G
```

According to the documentation, the default for this function is type = "missing.edge". This returns a list of conditional independencies with minimal testable implication per missing edge while type = "all.pairs" returns all implied conditional independencies between two variables. This is why the first one is shorter than the second one.

(d) The summary of the simulated data (N=10000) is shown below.

```

```

The coefficients for variables outside of the Markov blanket (D, F, H) have p-values greater than 0.05, indicating their independence from B. Meanwhile, the coefficients for variables within the Markov blanket have p-values less than 0.05, confirming that the Markov blanket property holds for vertex B.

#### Extra Credit

I will examine if  $X_i$  is d-connected to  $X_i$  given  $Pa(X_i, \mathcal{G}) \cup Pa(X_i, \mathcal{G})$ .

Any path from  $X_i$  to  $X_j$  must go through at least one vertex because  $X_i$  and  $X_j$  are not adjacent to each other. When  $X_i \leftarrow \ldots \leftarrow X_j$ , the vertex to the right of  $X_i$  is a parent of  $X_i$ . This cannot be a collider and it is in the conditioning set so the path is not active. When  $X_i \rightarrow \ldots \leftarrow X_j$ , no vertex between  $X_i$  and  $X_j$  can be  $Pa(X_i,\mathcal{G})$  or  $Pa(X_j,\mathcal{G})$  and at least one vertex will be a collider. This collider is not in the conditioning set so the path is not active. When  $X_i \rightarrow \ldots \rightarrow X_j$ , the vertex to the left of  $X_j$  is a parent of  $X_j$ . This cannot be a collider and it is in the conditioning set so the path is not active. The path between  $X_i$  and  $X_j$  is not active in all the three cases, so we can say that in any DAG with  $X_i$  not adjacent to  $X_j$ , necessarily  $X_i \perp_d X_j | Pa(X_i, \mathcal{G}) \cup Pa(X_j, \mathcal{G})$  holds.
